EVOLUTIONS

Release 2024 p.3

Release 2023 p.5

Release 2022 p.7

RELEASE

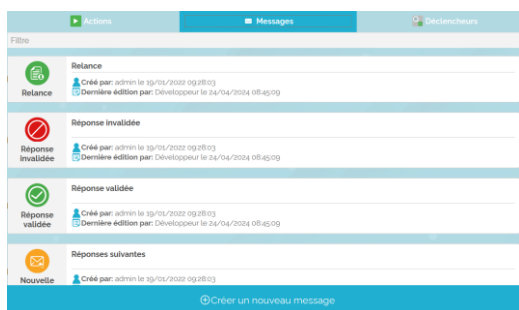

The 2024 version includes minor interface improvements. It has also undergone a general update of dependencies to enhance security.

SECURITY

Strengthening the encryption of locally stored data for both the server and user workstations. Clearing the cache now deletes all data related to the instance on the workstation. The instance's connection settings remain unaffected.

MESSAGE MINIMIZATION

The messages tab no longer displays message content previews. This change saves vertical space and allows more messages to be displayed on the page.

SLIDERS INVERSION

The sliders showing the status of campaigns (open/closed) and triggers (enabled/disabled) have been reversed: activation is now done by sliding the slider to the right

ANSWERS PAGE: NEW INDICATORS

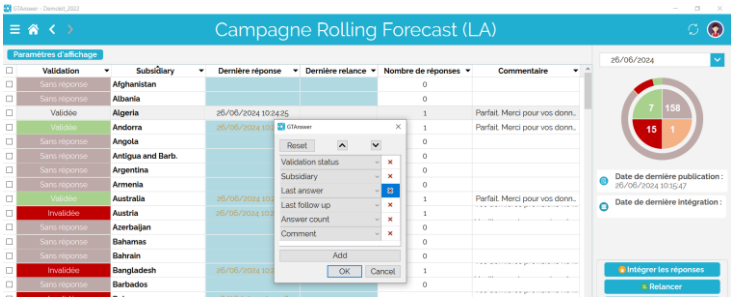

The answers page now displays new indicators for each entity::

| | Validation | Subsidiary | Dernière réponse | Dernière relance | Nombre de réponses | Commentaire |
|--------------------------|--------------|-------------------|---------------------|------------------|--------------------|-------------------------------|
| <input type="checkbox"/> | Sans réponse | Afghanistan | | | 0 | |
| <input type="checkbox"/> | Sans réponse | Albania | | | 0 | |
| <input type="checkbox"/> | Validée | Algeria | 26/05/2024 10:24:25 | | 1 | Parfait. Merci pour vos donn. |
| <input type="checkbox"/> | Validée | Andorra | 26/05/2024 10:25:18 | | 1 | Parfait. Merci pour vos donn. |
| <input type="checkbox"/> | Sans réponse | Angola | | | 0 | |
| <input type="checkbox"/> | Sans réponse | Antigua and Barb. | | | 0 | |

- The number of responses received
- The latest validation comment

ANSWERS PAGE: CUSTOMIZATION

On the response page, users can now choose the columns they wish to display and arrange them in their preferred order.

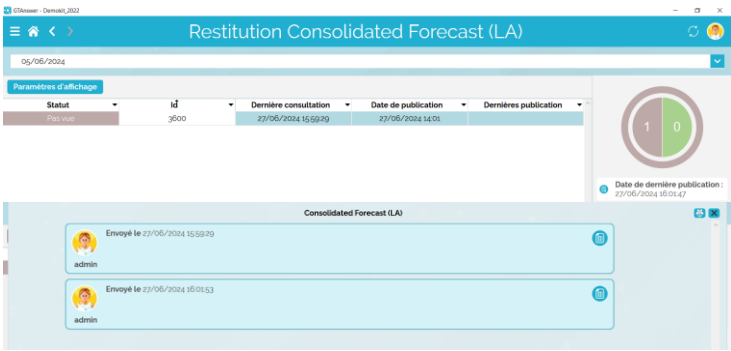

Column configurations are saved locally on the user's workstation. For each new publication created, if a column configuration exists for the corresponding template and is compatible with the publication, it will be automatically applied. Column configurations also store sorting preferences.

ACCESSING CHAT WITH A SINGLE CLICK

From the response page, access to an entity's discussion thread is now possible with a simple click on the corresponding row.

DASHBOARDS : ENTITIES AND « CHAT »

In the dashboards page, the display is now similar to the response page: each row corresponds to an entity. Additionally, a new column is available, displaying the submission date.

The column configuration can be customized, just like in the answers page. By clicking on the row corresponding to an entity, users can access a "discussion thread" that lists successive publications for the concerned entity. The restitution can be opened by clicking on the document icon.

RELEASE

2023

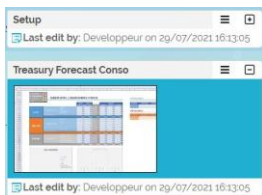

With its 2023 version, GT is ending the cycle started with the 2020 version. This will be the last version using the 2022 architecture and is mainly focused on interface improvements, made to improve projects and publications manipulations.

WELCOME PAGE

The welcome page is now simplified, the project tiles now have two buttons instead of three, the publication/action numbers are now available within the project statistics.

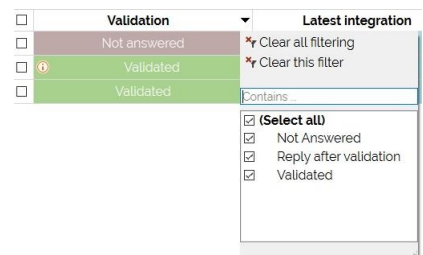

DOWNSIZING MODELS

Models can now be downsized, one by one or altogether, to ease the navigation between one another when projects has many them.

ANSWERS AFTER VALIDATION

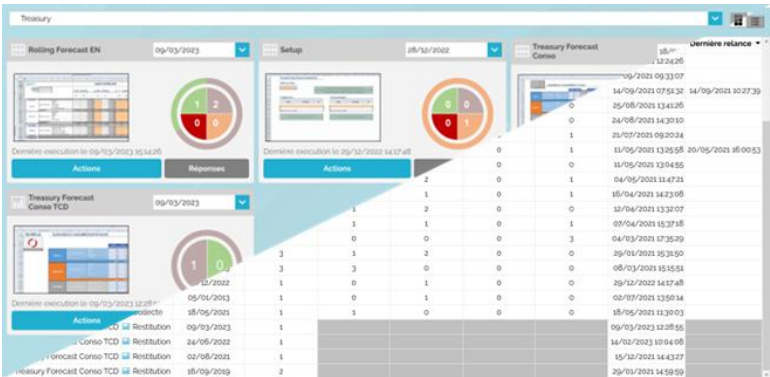

Answers sent after their entity has been validated can now be filtered in the answer page, for the manager to manipulate them easily.

NEW FORMULA: GTISUSERCONNECTED()

This formula is used to check if the questionnaire is opened by a user connected to GTAnswer. This could be used to block a questionnaire from been sent if the user is not connected. Paired with GTVALIDMAILADDRESS(), the user's identity is more secured.

NEW PUBLICATION DISPLAY MODE

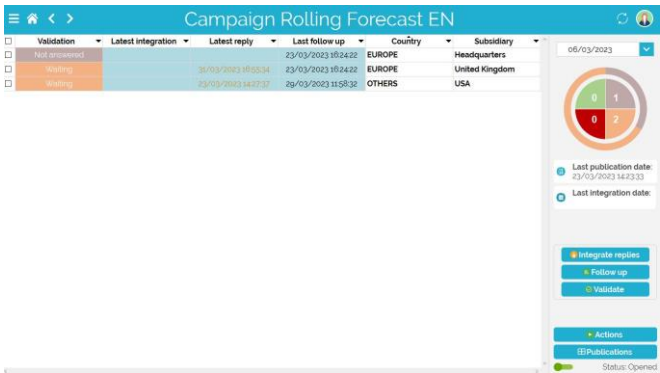

It is now possible to choose between two display mode for the publication page. switching between mosaic and list display where all the publication for a project are now altogether.

List mode is a great addition for projects with a lot of publications. Manager will be able to compare publications statistics between each other.

NEW STRUCTURE FOR THE ANSWERS PAGE

The answers page display has been reorganized to prompt more entities on the page.

The statement date is now above the right panel, with the entities' status graph beneath it.

Within the panel, publication management buttons have been added to manage the publication. Follow-ups are now sent using a simple button, Rich text can now be used in follow-ups (bold, color, emotes...)

VALIDATING MULTIPLES ENTITIES

It is now possible to validate (or invalidate) multiples entities at the same time..

DOCUMENT'S NAME

The questionnaire's name is now displayed in the discussion thread. The entity's name can be added to the name in the launch action parameters.

RELEASE

The 2022 version retains the architecture and the interface made for the 2020 release. It contains several stability fixes, updates external authentication protocols and implements publication parallelization.

EXTERNAL AUTHENTICATION

LDAP authentication now supports SSL transactions encryption (LDAPS).

External authentication can now be combined with GT authentication: on the same instance, allowing some users to use GT authentication while others could external authentication instead.

LDAP

PUBLICATION PARALLELIZATION

From now on, document generation is multithreaded: allowing projects to take advantage of application server processor cores in order to achieve a higher throughput. GTAdmin interface allows you to limit the number of cores used in parallel.
